Top stories of the week

➢Global oil prices declined sharply during May as Brent fell twenty percent to ninety-one dollars and West Texas Intermediate dropped nineteen percent to eighty-six dollars due to investor optimism over a potential peace deal between the United States and Iran. However, deep mistrust remains despite a recent sixty-day ceasefire extension. Iran claimed to shoot down an American aircraft, which Washington denied, while President Donald Trump entered the Situation Room to make a final determination regarding the next strategic steps. Trump continues to demand that Tehran surrender all nuclear materials and clear the Strait of Hormuz without enforcing any transit tolls. Meanwhile, crude loadings within the region have plunged dramatically, and executives from Chevron and Exxon Mobil emphasize that maritime risks remain real alongside historically low commercial inventory levels. Financial analysts expect that any opening of the critical strait will only be partial, keeping oil prices between ninety and one hundred dollars for the next few months. In other developments, the Philippines received its first cargo of Iranian crude via a complex offshore transfer, and the official Reserve Bank of India explicitly warned that a prolonged West Asia conflict poses significant downside risks to economic growth and inflation.

OVERVIEW

This report contains the parameters of fuel prices and is intended to provide information regarding the two primary used fuels in marine fuel bunkering tasks. The prices presented in this weekly report reflects the most strategic areas and hot spots that acts as a guiding line for the fuel prices all over the world.
